OBJECTIVE

Full Stack Developer with 3.5+ years of experience building scalable web applications using Node.js, Express.js, JavaScript, Angular, and Vue.js. Experienced in developing RESTful APIs, reusable UI components, SQL/NoSQL database solutions, and performance-optimized applications. Strong background in production troubleshooting, secure application development, and cross-functional Agile collaboration.

WORK EXPERIENCE

Senior Software Engineer — Infynect Labs Private Limited Sep 2025 – Present

Project: Launcher Web IPTV (Smart TV / Android TV)

- Architected a production-grade IPTV client for Android TV/Web using Vanilla JavaScript with live TV streaming, channel management, and real-time subscription handling.
- Built a multi-tier real-time data pipeline (cloud → MSO provider → pooler sync) with IndexedDB caching fallback to ensure uninterrupted playback during network failures.
- Integrated an AES-256-CBC encrypted content pipeline (Web Crypto API / PBKDF2) securing catalog, subscription, and EPG data end-to-end.
- Engineered a subscription lifecycle management system handling Active, Deactivate, Suspend, Blacklist, and Fresh states with real-time UI updates.
- Deployed across Samsung Tizen (.wgt signing and certification), Android TV, and LG webOS from a single codebase, with a 3-tier HLS caching system (memory → IndexedDB → live stream) eliminating black-screen delay on channel switches.
- Implemented an OTA update mechanism for silent deployments and independently diagnosed Tizen-specific issues — DHCP stabilization delays, MAC-based device fingerprinting, and API backward compatibility across TV generations.

Software Engineer – I — Infynect Labs Private Limited Feb 2023 – Aug 2025

Project: SMS, DRM, HEPI

- Migrated frontend applications from Angular to Vue.js and developed reusable Packages, Subscriptions, and Channels modules, achieving a 20% performance improvement.
- Developed RESTful APIs with Node.js and Express.js; optimized PostgreSQL and MongoDB queries, reducing data retrieval times by 30%.
- Mentored junior developers and delivered high-priority projects on schedule, consistently exceeding client expectations.
- Provided production support and issue resolution, minimizing downtime and ensuring reliable system operations.

- Implemented secure token-based authentication flows for web applications using JWT, supporting authenticated API access and session management.

TECHNICAL SKILLS

- **Languages & Frameworks:** JavaScript (Vanilla, Vue.js), Node.js, Express.js, HTML5, CSS3
- **Backend & APIs:** RESTful APIs, API Integration, Server-Side Development
- **Databases:** PostgreSQL, MySQL, MongoDB, IndexedDB, SQL Query Optimization
- **Authentication & Security:** JWT, OAuth 2.0, SSO, AES-256-CBC, Web Crypto API, PBKDF2, DRM
- **AI-Assisted Development:** Codex, Claude Code, Cursor, AI-assisted code generation, debugging, code analysis, refactoring, documentation
- **Tools & Platforms:** Git, GitHub, Jira, Android TV, Samsung Tizen, Agile

EDUCATION

Bachelor of Engineering —
Kongunadu College of Engineering and Technology June 2018 – May 2022
